

Election (Ballot Question)/ Pollster	Election date/ Survey dates	No	Yes	Undecided	Mosteller 2	Mosteller 5	Traugott
City Charter proposals Proposition No. 1 (Yes; No)	Nov 8, 2011	76.4	23.6	0			
SoonerPoll	Nov 1, 2011	54	34	12	30.07	32.8	0.71
Strategy Research Institute (The Fraternal Order of Police Lodge 93)	Aug 10, 2011	43	51	6	61.31	60.8	1.35

Definition of Mosteller 2 Measurement: The absolute difference between predicted and actual spread between the top two responses, where both predicted and actual percentages are normalized by a multiplicative factor so that the sum of the percentages for the top two responses is 100%. (Originally defined by Mosteller for the Democratic and Republican candidates; adapted here to be applicable to non-partisan and ballot measure elections.) Results above are sorted by Mosteller 2 evaluation and then by Traugott.

Definition of Mosteller 5 Measurement: The absolute difference between predicted and actual spread between the top two responses. This particular measurement does not factor in the pollster's undecided amount and, therefore, assumes the undecideds broke evenly among the two responses.

Definition of Traugott Measure: The absolute value of the log of the "odds ratio" between predicted and actual votes for the top two responses, expressed in percentage units. The "odds ratio" is the actual vote ratio for the top two responses divided by the predicted vote ratio. (Originally defined by Traugott, Kennedy, & Martin, May 2003, at AAPOR Annual Convention.)

Results of pollsters represented above were taken from their last published poll prior to the election. Only published polls are analyzed.
